

Liam-Bendzsa_Activity_1

Liam Bendzsa

2026-09-30

Purpose of this repository

This repository is for the activity portions of the graduate course GEOG712 offered at McMaster University in Hamilton, ON, Canada. This is *my* (Liam Bendzsa's) version, where all future assignment submissions will be posted to be reviewed by **paezha**, the Professor of the course. With that out of the way, here are a few things about the individual, Liam Bendzsa.

Liam's Research Interest

My primary research interest involves the use of **modal shifts** to reduce carbon emissions, and promote other ancillary, if not primary, benefits. For example, *exercise*, *socialization*, and *exposure to nature* are all things that are not found in the dominant North American mode of transport, the car, but are found in modes of **active transportation**

Favourites (*Canadian spelling, not sorry*)

Favourite Music

-
1. **Flyers** by *BRADIO*
 2. **Artificial Nocturne** by *Metric*
 3. **Remembering (feat. Tate McRae)** by *Yutaka Yamada*
 4. **Service and Sacrifice** by *Jeremy Zuckerman*
 5. **I Meant It** by *Brandon Boone*
-

Favourite Equation

$$N(t) = N_o * e^{-\lambda t}$$

Favourite Artists

Artist	Achievement
Ludwig van Beethoven	The greatest composer of all time.
Vincent van Gogh	Creator of <i>Starry Night</i> .
Wes Anderson	Director of <i>The Grand Budapest Hotel</i> .
Sia	Vocalist/writer of <i>This is Acting</i> .
Ursula K. LeGuin	Master of Fiction.

A Chunk of Code

I fixed this graph to make sense

```
plot(cars, col = "goldenrod3", pch= 21, bg= "cyan4",
     xlab = "Speed (mph)", ylab = "Stopping distance (ft)")
title(main = "Car Brakes in the 1920s",
      sub = "Created by Liam Bendzsa using cars",
      font.sub = "2", cex.sub = "0.75",
      font.main = "4", cex.main = "1.5")
```

Car Brakes in the 1920s
